

<b>Team id</b>	<b>PNT2022TMID46638</b>
<b>Project Name</b>	<b>Hazardous Area Monitoring for Industrial Plant Powered by IOT</b>
<b>Title</b>	<b>Problem Solution</b>

Define CS, fit into CC	<b>1. CUSTOMER SEGMENT(S)</b> <span>CS</span> <p>The customers of this product are the workers who works in hazardous area. Our aim is to assist, aid and help them to monitor the field parameters remotely and to keep track of the parameters. This helps in safety of the workers.</p>	<b>6. CUSTOMER CONSTRAINTS</b> <span>CC</span> <p>Deployment of huge number of sensors is difficult. It requires an unlimited or continuous internet connection to be successful</p>	<b>5. AVAILABLE SOLUTIONS</b> <span>AS</span> <p>The safety of the workers are monitored using IOT. Analytic data and field parameters are obtained &amp; processed to automate the process of monitoring. The drawbacks are high cost of maintenance and efficient only for short distance</p>	Explore AS, differentiate
	<b>2. JOBS-TO-BE-DONE / PROBLEMS</b> <span>J&amp;P</span> <p>The objective of this product is to obtain the different field parameters using sensor and process it using a central processing system. Cloud is used to store and transmit the data by using IoT. The workers could take decision through a mobile application</p>	<b>9. PROBLEM ROOT CAUSE</b> <span>RC</span> <p>The frequent change or unpredictable conditions of hazardous materials, made it difficult for the workers. These factors play a major role in making suitable substitutes for safety levels. It may be hard due to the workers negligence.</p>	<b>7. BEHAVIOUR</b> <span>BE</span> <p>Using mobile we can get timely report updates. Deep field analysis with key factors monitored by using gas and temperature sensor.</p>	
	Focus on J&P, tap into BE, understand RC
